Model P3 **Two Stage Cylinder Gas Pressure Reducing Regulator**

The Model P3 is designed for gases with inlet pressures up to 3600 psig (248 Barg). Standard adjustable outlet ranges from 1-10 (.07-.69 Barg) thru 10-500 psig (.69-34.5 Barg). Flow coefficient of 0.02, 0.06, and 0.20 available. This versatile cylinder gas regulator can be ordered with a variety of options to meet your system demands. Standard construction includes 40 micron integral filter and diffusion resistant stainless steel diaphragm. Gauges and CGA fitting is optional.

GENERAL SPECIFICATIONS

| | Inlet / Outlet Size: | 1/4", 3/8" & 1/2" (DN8, DN10 & DN15) | | | | | | |

STANDARD CONSTRUCTION

Captured Vent

The captured vent feature is designed to safely vent process fluid when handling toxic or hazardous media. The user can easily pipe this vent to a safe location. It features a 1/8" FNPT port located on the spring housing. This feature can be incorporated into a self-relieving regulator that provides an additional port to permit the piping away of the expelled media.

OPTIONS

NACE Construction - (P or R) in Position 6. - Internal wetted portions meet NACE standard MR0175, when exterior of the regulator is not directly exposed to a sour gas environment, buried, insulated or otherwise denied direct atmospheric exposure. SST/SST body/spring chamber materials only. Inconel w/TFE liner, Inconel X-750 spring.

Panel Mount - (A or B) in Position 14. - The panel mount feature requires a panel cut out of 1–3/8", complete with a threaded spring housing, and a panel mount ring to secure the regulator.

Tamper Proof - (1) in Position 15. - In this feature the control knob is removed and replaced with an acorn nut. The user can set the outlet pressure and securely tighten the nut, preventing any unwanted adjustments on the regulator.

Colored Knobs - (2, 8 and W) in Position 15. - In this feature the control knob is anodized aluminum either in black, blue or red, compared to the standard red composite knob. This allows for color coding of processes. Temperature range: -55 to 300°F (-45.6 to 149 °C).

Diaphragm Valve - (F) in Position 16. - The diaphragm valve is a shutoff valve. The resolution is course. The extended leg allows easy access to the knob when it is attached to a regulator. The valve is 1/4" male x 1/4" female outlet. This type of valve is sold about 90% of the time.

Packed Valve - (G) in Position 16. - The packed valve is a metering valve. The resolution is very fine. The packing around the stem is Teflon. The valve is 1/4" male x 1/4" male outlet.

Relief Valve - (H, J, K, or L) in Position 16. - The relief valve main function is to relieve excess downstream pressure due to system malfunctions. This feature prevents over pressurization by automatically venting of gas or liquid. The valve is fully adjustable and is 1/4" male x 1/4" male.

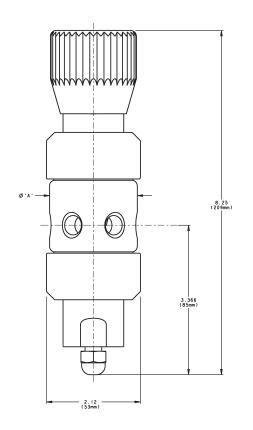

Cleaned for Oxygen Service #S-1134 - (M) in Position17. - This is a requirement for gaseous oxygen environments. All regulators requiring advanced cleaning shall be processed according to strict guidelines. **NOTE:** Design Pressure Rating shall not exceed 375 psig (25.8 Barg) when body material is SST and process medium is oxygen.

Cleaned per Spec. #S-1542 - (N) in Position 17. - Cleaning <u>identical</u> to that of #S-1134, but <u>not</u> labeled for application in oxygen service. <u>NOT</u> suitable for Oxygen Service.

About Two Stage Regulators

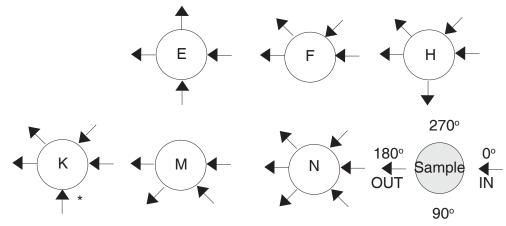

Two stage regulators provide precise outlet pressure control of gases with variation in supply pressure. The P3 features low operating torque, accurate adjustment and is capable of high flows with minimal pressure drop.

DIMENSIONS

| English Units In. & Ibs. | | | | | | | |
