

Bind-It™ Patient Care Packs

Manufacturer:

SKU#: 8217-10-0200

Bind-It™ Patient Care Packs are designed specifically for home use by thyroid patients receiving I131 treatment. By following the included instructions, patients will minimize contamination of their home isolation area and drastically reduce the risk of exposure to family members post-isolation.

Product Description

The United States is one of the only countries which does not isolate I131 treated patients in-hospital. It is a well known fact that patients kept in hospital isolation contaminate the room. From the washroom to the sleeping area. Sinks to television remote controls. If not removed, it can take up to 90 days + before background levels are achieved. What can a patient do in their own home? Soap and water don't work well. Most household cleaners don't work well. Further, most patients don't know much about radioactivity and contamination. Many think using bleach to "kill" it is the best thing to do. As anyone trained in radiation safety knows, bleach only makes the problem worse by causing the I131 to volatilize and spread further. This becomes a problem once the patient's isolation period ends. With widespread contamination across the washroom and bedroom, spouses and children entering the area are now exposed by direct contact with the contamination. The chance for internal uptake becomes quite high - especially for children. Bind-It Patient Care Packs allow patients to safely and effectively minimize and remove contamination from their isolation areas. The detailed instructions present easy to follow guidelines to help the patient minimize and remove contamination. Bind-It Patient Care Packs provide peace of mind to the patients, because it reduces their worry. They know they have a tool specifically designed to remove contamination. They rest easier because they know these products work.
