SmartLINK
Data Gateway

SmartLINK is the data gateway that links our products with your external herd management solutions and drafting controls.

When used with Waikato Milking Systems SmartD-TECT mastitis detection technology, SmartLINK sends the data collected to LIC's Protrack Vantage system. This allows your information to be consolidated and analysed seamlessly.

Using this technology allows both systems to integrate and share information. Drafting is automatic and cow management becomes much easier with the help of an audible alarm at cups on. Made specifically for rotary installation, SmartLINK is a must have if SmartD-TECT and Protrack Vantage are employed.

SmartLINK Controller
This single-board industrial computer allows easy integration between SmartD-TECT and Protrack. It integrates easily with any computer in your dairy, without requiring specialist equipment.

Antenna
This wireless antenna transmits the data from your SmartLink Controller to your router. It is IP54 outdoor rated, for robustness in real-life dairy conditions.

Router
This device is the final link between SmartD-TECT and your herd management computer.

FEATURES:
- Robust design for dairy shed use
- Remote wireless interface
- High performance data gateway
- Reliable connectivity
- Secure management

BENEFITS:
- Connects your data to LIC's Protrack
- Saves event data to MINDA
- Allows consolidation of data between systems
- Analysing your data becomes seamless
