Series 42 Self-operated Pressure Regulators Type 42-20 and Type 42-25 Differential Pressure Regulators

with Type 2420/Type 2425 Actuator (opening) and balanced Type 2422 Valve

ANSI version

Application

Differential pressure regulators for large heating systems and industrial plants · Differential pressure set points Δp from 0.75 to 145 psi (0.05 to 10 bar) · Valves NPS ½ to 10 ¹⁾ (DN 15 to 250) · Pressure rating Class 125 to 300 · Suitable for liquids and vapors ²⁾ from 40 to 660 °F (5 to 350 °C), for air and non-flammable gases up to 175 °F (80 °C)

The valve opens when the differential pressure rises.

The differential pressure to be controlled is transmitted to the spring-loaded operating diaphragm in the actuator and converted into a positioning force to move the valve plug. The regulators control the differential pressure according to the adjusted set point.

Special features

- Low-noise, medium-controlled proportional regulator requiring little maintenance
- Type 42-20: Fixed set point
 Type 42-25: Set point adjustable in wide range
- Single-seated valve with a plug balanced by a stainless steel bellows or a diaphragm (NPS 2½ to 10/DN 65 to 250)
- Suitable for circuit water, water/glycol mixtures, steam and air as well as other liquids, gases and vapors, provided ed these do not affect the characteristics of the operating diaphragm
- Valve body optionally made of cast iron A126B, cast steel A216 WCC or cast stainless steel A351 CF8M

Versions

Differential pressure regulators for installation in a bypass pipe or short-circuit pipe (see Application) · Flanged connections

Type 42-20 (Fig. 1) · Type 2422 · Balanced by a bellows NPS 1/2 to 4 (DN 15 to 100) · Balanced by a diaphragm NPS 21/2 to 4 (DN 65 to 100) · Type 2420 Actuator · Fixed set point, adjusted to $\Delta p = 3$, 4, 6 or 7 psi (0.2, 0.3, 0.4 or 0.5 bar)

Type 42-25 (Fig. 2). Type 2422 Valve · Balanced by a bellows NPS ½ to 10 (DN 15 to 250) · Balanced by a diaphragm NPS 2½ to 10 (DN 65 to 250) · Type 2425 Actuator Set point adjustable within the range between 0.75 to 145 psi (0.05 to 10 bar)

Fig. 2: Type 42-25 Differential Pressure Regulator

Special versions

Actuator with two diaphragms (Type 42-25) · Version with FPM diaphragm, e.g. for mineral oil · Special reduced C_V (K_{VS}) coefficient · Valve in corrosion-resistant version (min. material grade 1.4301) · Valves larger than NPS 10 (DN 250) · Version for temperatures above 430 °F (220 °C) Backflow prevention (▶ T 3010) · Version for deionized water Version free of non-ferrous metal · Version for small flow rates Valve with micro trim with C_V 0.0012 to 0.05 (K_{VS} 0.001 to 0.04) or C_V 0.12, 0.5 and 1.2 (K_{VS} 0.1, 0.4 and 1) without pressure balancing

¹⁾ Valves larger than NPS 10 (DN 250) on request

²⁾ Version balanced by a bellows only

Accessories

Required accessories, such as compression-type fittings, needle valves, equalizing tanks and control lines, are listed in Data Sheet ▶ T 3095.

Principle of operation (see Fig. 3)

The medium flows through the valve in the direction indicated by the arrow. The position of the valve plug (3) determines the differential pressure over the cross-sectional area released between the plug (3) and seat (2).

The Type 2422 Valve is balanced. The forces acting on the valve plug created by the upstream and downstream pressures are balanced by a balancing bellows (5) or balancing diaphragm (5.1).

In valves balanced by a bellows, the upstream pressure p_1 acts on the outside of the metal bellows (5), while the downstream pressure p_2 acts on the inside of the bellows. In a valve balanced by a diaphragm, the downstream pressure p_2 acts

on the inside and the upstream pressure p_1 on the outside of the balancing diaphragm (5.1). In both cases, the forces created by the upstream and downstream pressures acting on the valve plug are balanced out.

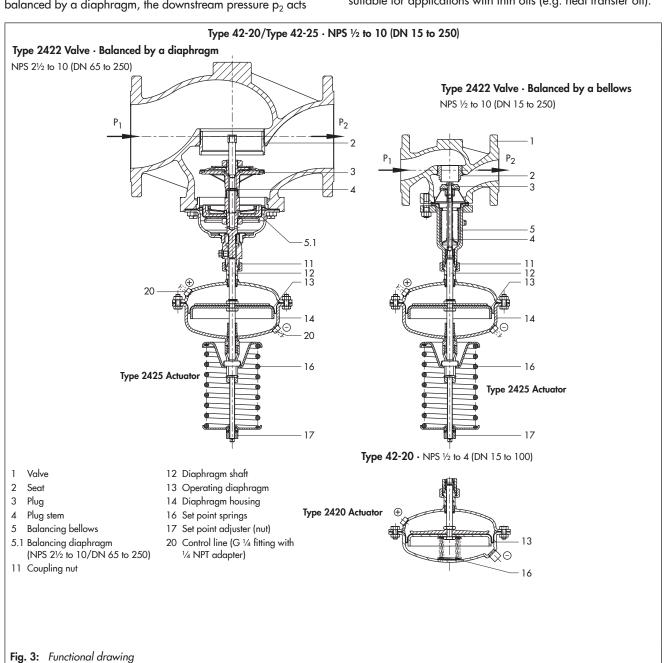

The differential pressure to be controlled is transferred to the operating diaphragm (13) where it is transformed into a positioning force. This force is used to move the plug (3) according to the force of the set point springs.

In Type 42-25, the set point can be adjusted at the set point adjuster (17).

In Type 42-20, the set point springs (16) in the actuator determines the set point.

All versions have control lines to transfer the high pressure and low pressure to the actuator.

SAMSON offers a special version of Type 42-25 Regulator with an actuator with two diaphragms, which is especially suitable for applications with thin oils (e.g. heat transfer oil).

Type 42-25 Differential Pressure Regulator with two diaphragms

SAMSON offers a special version of Type 42-25 Regulator with an actuator with two diaphragms, providing increased functional safety.

The two diaphragms separate both diaphragm chambers connected to the high-pressure and low-pressure connections. They generate a positioning force from the differential pressure. A mechanical diaphragm rupture indicator (22) is located between the two diaphragms, which responds at approx. 22 psi (1.5 bar). In the event of a diaphragm rupture, the pressure in the space between the two operating diaphragm starts to increase. This causes the pin in the diaphragm rupture indicator to be pushed outwards and a red ring appears, indicating the diaphragm rupture. The intact operating diaphragm takes on the control task of the ruptured diaphragm.

A pressure switch can be optionally mounted to the actuator to trigger an alarm.

If a diaphragm rupture is indicated, we recommend replacing both diaphragms.

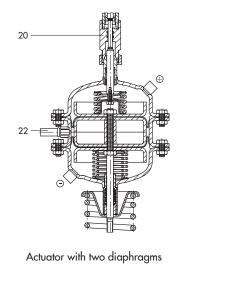

Installing the valve and mounting the actuator

Valve and actuator are delivered unattached. A coupling nut is used to attach the actuator to the valve. The actuator is to be mounted preferably after the valve is installed in the pipeline.

The following points must be observed:

- Installation of the valve in horizontal pipelines
- Direction of flow must match the direction indicated by the arrow on the body
- Install a strainer (e.g. SAMSON Type 2 NI) upstream of the valve.

22 Diaphragm rupture indicator

Fig. 4: Type 42-25 with actuator with two diaphragms (special version)

Permissible mounting positions

- Actuator suspended downwards (see photo): Standard installation, all versions, above 175 °F (80 °C) and for applications with steam
- Actuator upright (actuator on top of the valve): All versions NPS ½ to 3 (DN 15 to 80) and max. 175 °F (80 °C)
- Actuator sideways: Only versions with fixed plug guide
 Refer to ► EB 3007 for details.
