Equipment Description

RotoClone N size 6 Arrangement D in grade 304 stainless steel

Our clients goal was to handle dust generated in the production of agar jelly commonly used by laboratories in Petri dishes. With previous experience in using the AAF RotoClone N, the customer had no hesitation in selecting the unit for this application.

AAF supplied a RotoClone N size 6 Arrangement D in grade 304 stainless steel complete with automatic water level controls with conductivity probes, an auto-dump valve with timer and variable speed exhaust fan set.

Outcome: The AAF RotoClone N exceeded all customer requirements in terms of performance, especially in relation to the noise levels within the wash room area and considers the AAF RotoClone N an excellent solution for this otherwise difficult application.
